Phone: 440.356.8743

More information: stemcell@academicventures.com

Course Faculty

Experts in bioethics from Harvard Stem Cell Institute, Case Western Reserve University School of Medicine, Massachusetts Institute of Technology, and Harvard University will lead sessions.

Much more than human embryo debate

Embryonic stem cell research has emerged as one of the world's most controversial areas of biomedical research. But even alternative methods that sidestep that debate raise a host of issues in their own right. As research marches toward clinical applications for patients, the scientific and ethical issues will continue to evolve in ever more complex directions.

This weeklong intensive seminar addresses the major issues in the science, ethics and policies of stem cell research.

Who should attend?

Stem cell research oversight committee members, policymakers, bioethicists, patient advocates, industry representatives, clinicians and scientists all are encouraged to register.
